

CLINICAL PROGRESS NOTE -- OUTPATIENT NEUROLOGY

Comprehensive Patient Encounter & History of Present Illness

Patient: Ahmed Ali
Encounter Date: 2026-08-15
Attending Physician: Dr. Hala Mansour, MD
Vital Signs: BP: 124/82 mmHg | HR: 72 bpm | Temp: 36.8 C | SpO2: 99%

Subjective / History of Present Illness:

45-year-old male with no prior history of chronic migraines presents with new-onset persistent daily headaches for the past 6 continuous weeks. Symptoms unprovoked, worse in afternoons. Patient tried over-the-counter Ibuprofen 600mg TID and Acetaminophen for 4 weeks with zero relief. Denies fever, visual aura, motor weakness, or recent head trauma.

Physical & Neurological Examination:

Alert and oriented x 3. Cranial nerves II-XII intact. Sensation intact bilaterally. Motor strength 5/5 in all extremities. No pronator drift. Reflexes 2+ symmetric. Funduscopic exam: Sharp disc margins bilaterally, no papilledema noted.

Assessment & Plan:

1. Chronic refractory headache syndrome -- rule out intracranial mass or vascular lesion.
2. Ordering non-contrast Brain MRI (CPT 70551).
3. Initiating physical therapy referral and lifestyle modifications.
