

PHYSICIAN EXPANDED CLINICAL ADDENDUM

Response to Payer Prior Authorization Documentation Request

Patient Name: Ahmed Ali (Member ID: ABC-4471-9920)
Ordering Provider: Dr. Hala Mansour, MD (Neurology)
Date of Addendum: 2026-08-25
Regarding Request: Prior Authorization Appeal / Re-evaluation for CPT 70551

Specific Clarification of Medical Necessity & Conservative Management:
To Medical Review Board -- ABC Insurance:

1. Conservative Therapy Trial Timeline (§4.2 Policy Compliance):

Patient has documented failure of conservative management exceeding 6 weeks:

- NSAIDs: Ibuprofen 600mg TID and Naproxen 500mg BID for 4 weeks (No improvement).
- Physical Therapy: Completed 6 weeks of cervical spine and posture therapy (2 sessions/week).
- Muscle relaxants: Cyclobenzaprine 10mg nightly for 2 weeks (Discontinued due to lack of efficacy).

2. Soft Tissue MRI Necessity vs 2024 CT Scan:

Previous normal CT scan from 2024 was performed for acute trauma, not parenchymal evaluation.

MRI is uniquely indicated to rule out structural dural lesions, microvascular ischemia, or posterior fossa pathology.

Conclusion: Clinical documentation establishes full medical necessity under Plan Policy §4.2.

Attending Physician: Dr. Hala Mansour, MD -- Chief of Neurology
